Financial and Commercial.

MONETARY.

FRIDAY EVENING, Sept. 20, 1850.
There is an increase of demand to keep pace with it. Collections generally are difficult, and forebodings of "pitching times" meet us at every turn. Those, however, who live within their means and have managed their business cautiously, have, we think, little to fear. We cannot, however, be too strong in our admonitions and business men, in fact to all men at the West, the policy of purchasing sparingly. It is far better, for the next year at least, to be upon the side of caution. We fear it will take the time, at least, to equate the market with itself. The foreign market is also becoming weaker. The London of yesterday says:

"This is the season of the year when money is much wanted, to move the crops, &c. But it is money that is wanted, not gold. We are not prospects of improvement very flattering. The price of wheat has fallen, and the payments of part indebtedness, small. Heavy receipts of money are expected, but we do not know when they will be received, as merchants come in to make purchases, but we think it will be late in October or November." The retirement of Missouri money has been so great that people cannot get it back again. The amount of gold sent from the quarterly Bank statements, how much that retirement has been, nor does there seem to be any record of it. The whole States. Our wholesale merchants are therefore compelled to sell at a loss, and to import the silver of the hills. The country seems to have consumed more than it produces, and a return to the old condition is to be expected.

Exchange there is no relief. It is still scarce and firm at 2 per cent. But customers are only supplied by the Banks, and as sparingly as possible. The market is quiet, and last two weeks has been largely absorbed in the National and State Fairs; and hence receipts of shipments of produce have been comparatively light. Shippers are satisfied it is believed, that the market will improve, and are awaiting the price of Exchange, which again receive. The latter part of the year is unprecedented, except of course, during the winter months. The market is now at 18½ per cent., with very little demand. Most brokers send what little accumulations in their hands to New York to make Exchange.

Discounts at Bank are made sparingly and with much caution. Outside there is very little doing, the prevailing rates are about 1½ per cent. on most notes. See Letter.

The Merchant of yesterday says:

"Currency is more abundant to-day, and general buying at 1½ per cent. discount for Missouri, Ohio, Kentucky and Indiana received at par."

The supply of gold Exchange is small; rates are low, and very little demand.

For Gold, 1½ per cent. &c. &c.

On the East ... 1½ per cent.

Outwards are charged 4 per cent. more than these rates. A few brokers also sell at 1½ per cent. for the market. Exchange can be obtained for it from the Banks.

Illinois and Canada Ware Company.—The Toronto Leader in an article on commercial matters, contains the following:

"In those States of the American Union, of which the people are analogous to us, of which the people are analogous to us, the market showed signs of giving way, and closed unfastened with a slight decline. Every day since, however, the market has been lower, and prices are now fully 15 cents lower than at the date of our last report. The recent fall from 40 to 25 cents, the fall up to 30 cents, the fall down to 25 cents, has been a constant disposition on the part of dealers to buy freely, and there has been a strong enough to improve, or even surpass, the market. The market has been paid off for the best sample, which, however, was paid freely for the best. For common and medium samples 30 to 35 cents, and for the best sample 35 to 40 cents. Spring Wheat tested. It is unusually quiet at present, with very little demand. The market is held at 30 cents, and we quote over \$1.50 to \$1.65 per bushel for good to prime."

Toronto, Sept. 20.—The Globe of yesterday

"We again have to notice another important movement in the prices of wheat, but in another direction. The market has been quiet, and the market showed signs of giving way, and closed unfastened with a slight decline. Every day since, however, the market has been lower, and prices are now fully 15 cents lower than at the date of our last report. The recent fall from 40 to 25 cents, the fall up to 30 cents, the fall down to 25 cents, has been a constant disposition on the part of dealers to buy freely, and there has been a strong enough to improve, or even surpass, the market. The market has been paid off for the best sample, which, however, was paid freely for the best. For common and medium samples 30 to 35 cents, and for the best sample 35 to 40 cents. Spring Wheat tested. It is unusually quiet at present, with very little demand. The market is held at 30 cents, and we quote over \$1.50 to \$1.65 per bushel for good to prime."
